About Recycling

Recycling is the process of converting waste materials into new materials and objects. It helps reduce the consumption of fresh raw materials, decreases energy usage, lowers greenhouse gas emissions, and minimizes pollution.

When

Recycling can be done daily as part of your regular waste management routine. Most communities have weekly or biweekly recycling pickups. You can also take items to local recycling centers year-round.

Contacts

For more information on local recycling services, visit your municipality's website or contact environmental organizations in your area. You can also email us at recycle@earthcare.org.
